

The Sustainability Transformation Service helps businesses aiming to:

- **Achieve Net Zero**
- **Reduce their product's environmental footprint**
- **Save costs by minimising energy usage**

We can help at a product, process or business level from Goal Setting through to Delivery of Interventions. Our tailored services are flexible to the size and complexity of your business and your challenge, where you can utilise individual stages or the entire framework.

1. Goal Setting

2. Data Collection

3. Sustainability Modelling

4. Analysis & Recommendation

5. Road Mapping

6. Delivery of Interventions

Sustainability Transformation Service

NCC's Sustainability Transformation Service

01

Goal Setting

- Collaboration to set goals
- Alignment with relevant legislation for current and future targets
- Development of tailored strategies.

03 Sustainability Modelling

- Carbon Accounting for organisation environmental impact
- Tailored Life Cycle Assessments for products and processes
- Cost models using methods such as techno-economic analysis (TEA).

05

Road Mapping

- Path creation towards realising your company's goals, aligning with key drivers, such as legislation.

NET
ZERO

02

Data Collection

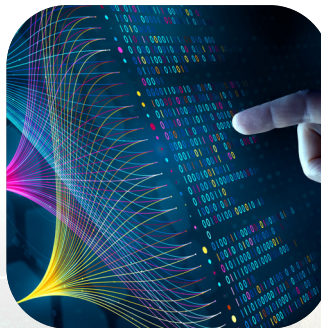

- Primary data collection using energy monitors
- Exclusive use of available databases and literature
- Accurate and informed decision making.

Analysis & Recommendations

04

- Analysis of the models
- Identification of environmental hotspots
- Recommendations for interventions to minimise the impact.

06

Delivery of Interventions

- Access to NCC's comprehensive engineering and business services
- Planning and implementation solutions.
